

How to plant an ANNUAL

STEP 1
Dig a hole as deep as the root ball and two times as wide.

STEP 2
Remove the plant from its container and place the root ball in the hole, ensuring that the top of the root ball is at soil level.

STEP 3
Fill the hole until the soil line is just at the base of the plant and even with the surrounding soil surface. Gently tamp the soil around the plant to remove air pockets.

STEP 4
Water the plant well and add a 2-inch (5cm) layer of mulch around the planting area. Continue to water regularly, whenever the top inch of soil is dry to the touch.
